

**REVIEW**  
**for the educational and scientific program “Management”**  
**for training doctors of philosophy**  
**at the Institute of Agrarian Economics**  
**in the specialty 073 “Management”**

According to the Strategy for the Development of Higher Education in Ukraine for 2022-2032, rapid societal changes require both professional and general competencies from specialists. The main requirements are the critical and systematical thinking, work in uncertain conditions, creativity, interdisciplinary communication, and mastery of several languages. Therefore, providing high-quality training of specialists who will conduct research and look for new ways to solve existing problems is extremely important.

The peer-reviewed educational and scientific program of the third level of higher education in the specialty 073 “Management” of the field of knowledge 07 “Management and administration”, developed at the Institute of Agrarian Economics, has a clear and logical structure. The educational and scientific program and its educational components totally meet the requirements of the legislation and the Higher Education Standard in the specialty 073 “Management” for the third (educational and scientific) level of higher education, approved by the order of the Ministry of Education and Science of Ukraine dated 12.24.2021 No. 1436. The program takes into account strategic directions of reforming the national economy and oriented towards trends in the development of the specialty, the labor market, and the interests of graduate students. The structural and logical scheme of training successfully combines the sequence of studying disciplines, the plan and schedule of the educational process. Due to this, the program ensures appropriate program results to the demands of the labor market and the interests of graduate students. The declared professional and general program competences will contribute to the successful employment of graduates, in particular to management positions.

The foreseen component regarding scientific and pedagogical practice of graduate students deserves approval. However, it would be expedient to expand the base of higher education institutions for its completion, as well as expand opportunities for international academic mobility of graduate students.

Summing up, the structure and content of the educational and scientific program “Management” meets national and international requirements for ensuring the quality of higher education in the training of doctors of philosophy for the third (educational and scientific) level. It can be recommended for implementation at the Institute of Agrarian Economics of the National Academy of Sciences of Ukraine.
